This report also describes changes to the Fund that occurred during the reporting period.

What were the Fund costs for the past year?

(based on a hypothetical \$10,000 investment)

Class Name	Costs of a \$10,000 investment	Costs paid as a percentage of a \$10,000 investment
Class A	\$159.00	1.44%

How did the Fund perform last year and what affected its performance?

The Fund's Class A shares underperformed the MSCI All Country World ex USA Net Total Return USD Index (the "Index") during the 12-month period ended September 30, 2024.

During the period, non-U.S. equities posted strong returns but lagged their U.S. counterparts, as U.S. mega-cap and artificial intelligence beneficiaries have continued to lead the market.

Stock selection contributed positively to Fund performance relative to the Index over the period, aligning with the Fund's focus on bottom-up security selection. Detractors from relative performance included sector and region/country allocations. Currency effects on the Fund's performance were negative during the period.

Within industrials, stock selection and a zero-weight positioning to energy contributed positively to relative results. However, stock selection in financials and consumer discretionary detracted from relative returns. From a geographic perspective, stock selection in Japan, the U.S., and Germany bolstered relative returns. The Fund's stock selection in China, as well as an underweight positioning in Taiwan, were the largest detractors.

How did the Fund perform over the past 10 years?

The line graph below reflects a hypothetical \$10,000 investment and assumes the deduction of the maximum sales charge associated with that investment. The returns shown in the line graph and table assume the reinvestment of dividends and capital gains, but do not reflect the deduction of taxes that a shareholder would pay on distributions or the redemption of Fund shares. The performance information shown below represents past performance and is no guarantee of future results.
