## What were the Fund costs for the past six months?

(based on a hypothetical \$10,000 investment)

Class Name	Costs of a \$10,000 investment	Costs paid as a percentage of a \$10,000 investment
Class R5	\$25.00	0.49%

## How did the Fund perform for the past six months and what affected its performance?

The Fund's Class R5 shares outperformed the Bloomberg Intermediate U.S. Government/Credit Total Return Index Value Unhedged (the "Index") during the 6-month period ended March 31, 2025.

Long-term Treasury yields rose through the period as inflationary concerns resurfaced after trade tensions heightened, thereby impacting Fund performance. For the short end of the curve, yields fell as talk of future Federal Reserve interest rate cuts reemerged amid growing recession concerns.

The Fund's short duration contributed to performance relative to the Index. However, this was offset by negative relative returns from the Fund's allocations to collateralized mortgage obligations and mortgage-passthrough securities.

## How did the Fund perform over the past 10 years?

The line graph below reflects a hypothetical \$10,000 investment. The returns shown in the line graph and table assume the reinvestment of dividends and capital gains, but do not reflect the deduction of taxes that a shareholder would pay on distributions or the redemption of Fund shares. The performance information shown below represents past performance and is no guarantee of future results.
